

SHEET METAL CONT.

1949-51 Ford/ mercury woodie rear wheel tub repair panels

These panels are the lower tails of the wheel tub that rust off or are crushed. They are constructed from 18-gauge sheet stock and formed in our shop. The rear tail panel is 13" tall from the bottom lowest edge and 15" wide. The front panel is 9" tall from its lowest edge and 14" wide. These panels have the formed edge that butts into the quarter panel.

1949-51 Ford/Mercury woodie metal to wood gate conversion

This is a kit to convert your metal gate to a wood gate. With the removal of the outer skin and then the addition of these parts your gate is now the same as a wood gate. These panels are 19 gauge. The main center panel is designed to be but welded into place and the filler tabs get welded on top of the old gate in the slot at the top of the gate. A wood gate inner spare tire-mounting bracket has a higher profile than the one used with a metal gate. An original wood gate one will work if you have one or use our duplicate reproduction. The reproduction one is constructed from 13 gauge stock and has the ribs formed in the bottom just as the original. The reproduction also has the four shouldered studs welded in place. The outer bracket is an exact copy of the original, use ours or find an original. The outer bracket is different for a wood gate than the one used on the metal gate. The reproduction outer bracket comes with the tire-mounting studs welded in place. The inner spare tire-mounting bracket is 13 gauge material just like Henry made them. The outer spare tire-mounting bracket is 11 gauge as the original one was.

Description	Item number	price
